EDUCATION

Jaypee University of Engineering and Technology

Bachelor of Technology in Computer Science and Engineering

July 2022 – June 2026

CGPA – 7.8

EXPERIENCE

Data Engineer Intern

June 2026 - Present

7startup

Remote, India

- Spearheaded the company's inaugural CRM database migration, architecting a modular framework for 11 tables with zero post-migration data issues reported.
- Engineered a custom seed data generator, decreasing API testing environment setup by 40% (from two hours to 40 minutes) and empowering three developers to test and debug endpoints.

Software Engineer Intern

June 2025 - September 2025

InstaPrepsAI

Remote, India

- Developed a modular image annotation platform using ReactJS and AWS S3, enabling scalable labelling for 10,000+ images while reducing storage latency by 25%.
- Integrated AWS S3 data pipelines with the frontend UI, automating dataset retrieval and improving throughput by 30%.
- Delivered 3 annotation features in collaboration with AI researchers, reducing dataset preparation time by 20% across 2 model training cycles.

PROJECTS

Order Flow | Java, Spring Boot, PostgreSQL, Kafka, Redis

[Link](#)

- Built a 4-service Kafka-based microservices architecture, reducing transaction latency by 40ms and eliminating synchronous service calls.
- Engineered stateless JWT authentication with BCrypt hashing and Redis-backed refresh token rotation, securing 100% of endpoints across 4 microservices via API Gateway.
- Implemented Redis idempotency keys (24-hour TTL) to prevent duplicate orders and Saga compensating transactions to maintain 100% cross-service consistency.
- Containerised all 4 microservices using Docker Compose, enabling one-command setup and eliminating environment inconsistencies.

IAM Platform | Java, Spring Boot, OAuth2, JWT, PostgreSQL

[Link](#)

- Architected an IAM platform with OAuth2 and Redis-backed token blacklisting, reducing unauthorised access attempts by 90% across 500+ simulated sessions.
- Developed a 4-layer security framework supporting password, OAuth2, and token refresh flows, reducing token validation overhead by 30% and improving audit log queries by 25%.
- Added structured audit logging (SLF4J + Logback) for every auth event - login, logout, token refresh, and access denial, providing full traceability for security incident review.

SKILLS SUMMARY

- **Languages:** Java, SQL, Python
- **Core Java:** OOP, Collections Framework, Streams API, Exception Handling, Generics
- **Backend & APIs:** Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Spring Cloud, REST APIs
- **Distributed Systems & Messaging:** Apache Kafka, Microservices, Event-Driven Architecture
- **Security:** JWT Authentication, OAuth2
- **Databases:** PostgreSQL, MySQL, Oracle SQL, Redis
- **Testing & Practices:** JUnit, Mockito, Agile
- **Tools & Platforms:** Git, Gitlab, Docker, Docker Compose, GitHub Actions, Postman, Swagger, IntelliJ IDEA

ACHIEVEMENTS

LeetCode

[Link](#)

- Solved 500+ LeetCode problems, achieving a contest rating of 1744 and ranking within the top 12% globally.
